SUMMARY

Recent Computer Science graduate with hands-on experience in ASP.NET Core backend development. Skilled in building RESTful APIs, designing relational databases, and applying modern software architecture principles. Seeking a Junior Backend .NET Developer role.

EDUCATION

Bachelor of Science in Computer Science

Misr University for Science & Technology | 2022 - 2026

CGPA: 3.68 / 4.00 (Excellent)

Graduation Project: A*

TECHNICAL SKILLS

- Languages: C#, SQL, Python, C++
- Backend: ASP.NET Core Web API / MVC, EFCore, LINQ, RESTful APIs
- Architecture & Design: (Onion / N-Tier) Clean Architectures, Repository & Unit of Work, Specification Pattern, Dependency Injection, Pagination, SOLID Principles, caching.
- Database: SQL Server, Erd, Schema, Code-First, Database-First
- Tools: Git, GitHub, Postman, Swagger, Redis, AutoMapper, Stripe

RELEVANT EXPERIENCE

Backend .NET Developer Trainee

Route Academy | 2024 – 2025

- Completed a 120-hour Backend .NET Diploma with hands-on training in Database Design, C#, Advanced C#, OOP, SOLID Principles, LINQ, Entity Framework Core, Caching, and Clean Architecture principles.
- Built ASP.NET Core MVC and Web API applications using Entity Framework Core (Code-First, Database First, Fluent API, Data Annotations, and Migrations) and ASP.NET Identity.
- Designed relational databases using SQL Server, including ERD, database schema, stored procedures, views, and indexing.
- Applied Clean Architecture principles through Onion Architecture, Repository Pattern, Unit of Work, Dependency Injection, JWT Authentication, AutoMapper, SignalR, Swagger, Redis caching, and Git/GitHub in practical projects.

PROJECTS

Neurea Mental Health Support System | Graduation Project [GitHub](#)

- Developed the backend and therapist/admin dashboard for a multi-platform mental health support system that enables patients to access mental health services while allowing therapists and administrators to manage appointments, consultations, and platform operations.
- Integrated the ASP.NET backend with an existing Django backend through a shared database and JWT-Secured server-to-server communication, enabling seamless synchronization between the web platform and mobile app.
- Implemented Entity Framework Core (Database-First with Reverse Engineering), SQL Server, Repository & Unit of Work, AutoMapper, and RESTful API design

Laboratory Management System | Information Technology Course Project [GitHub](#)

Ranked 2nd among the top projects in the Information Technology course and selected as a candidate for future university laboratory management system development

- Developed a layered ASP.NET Core Web API for laboratory asset management, appointment scheduling, request handling, reporting, and administrative workflows
- Built a custom authentication and authorization system from scratch without ASP.NET Identity, implementing JWT access and refresh tokens, OTP email verification, role-based access control, instructor onboarding, and image upload functionality.
- Designed reusable data access and business layers using Generic Repository, Generic Service, and Unit of Work patterns, extending generic implementations with entity-specific business logic while minimizing code duplication.

E-Commerce Backend API | Training Project (Route Academy) [GitHub](#)

- Built an ASP.NET Core 8 RESTful e-commerce backend with authentication, product catalog, shopping cart, order management, and Stripe payment integration.
- Applied Onion Architecture with Repository, Unit of Work, Service Manager, and Specification patterns with SQL Server, EFCore, ASP.NET Identity, JWT, and Redis.

Enhanced performance and code quality by implementing pagination, custom Redis caching, AutoMapper, centralized exception handling, and Swagger.
